

Assembling your Warren Evans bed

YOU WILL RECEIVE WITH YOUR BED

IMPORTANT

Put the larger circle washer on first followed by the locking washer and nut, tighten by hand first and then tighten firmly with the spanner

STEP 1: ASSEMBLE YOUR FRAME

FOOT END

Lay both frames face down **on a carpet, or a sheet to prevent scratching.**

Start at the foot end first, (which will be stained or painted, the head end which goes against the wall is unfinished).

NOTE: (all slats are already firmly fixed down).

Holding your thumb at the base, to make sure the frames are level, use the clasps provided to clamp the frames together.

(Repeat at the other end of the frame).

Insert the 2 bolts in the Hexagon holes (which face outwards) and fix the leg support to the Connector Curve using the washers and nuts provided.

(remember to put the large circle washer on first followed by the locking washer and nut and tighten firmly with the spanner)

Position your frame "Connector Curve" onto the bolts protruding (Repeat at the other end of the frame).

Then tighten the nuts with the spanner provided (Repeat at the other end of the frame)

Place legs in position and screw clockwise until the leg is very tightly secure and repeat at all four corners.

Lift the side of the bed frame.

Gently let the bed down so not to damage legs.

STEP 2: FIXING YOUR HEADBOARD

HEADBOARD END

If you have purchased a headboard, attach both triangular headboard supports at the headboard end.

Attach the headboard struts to the triangular supports. Use long Hexagonal screws to secure them. Ensure the L-brackets on the struts are facing inwards on both sides. If adjusting height of headboard, do it at this stage. and raise/lower the struts as needed.

Lay the headboard flat on a soft surface (lay down a sheet/blanket to avoid scratching) and insert 4 short hexagonal screw directly into it, so that just under 1 cm of thread is left visible.

Align the screws in the headboard with L-bracket holes and drop it in place gently. Tighten the screws to secure headboard in place.

STEP 3: POSITION YOUR BED & MATTRESS

Lift your new Warren Evans bed frame into position. Do not drag the bed as this could cause damage to the legs.

Lift your new Warren Evans mattress into position. The mattress will sit slightly wider and longer than your bed frame.
